UNISPACE+50 Opening Panel
The past, present and future of the peaceful uses of outer space
Vienna, 18 June 2018

Statement by
Prof. Dr. Kai-Uwe Schrogl
President IISL
50th anniversary of the Outer Space Treaty in 2017

Time for reflection

- Are the existing principles of space law still valid?
- Are the provisions of space law universally accepted?
- Does space law fulfil the expectations of the stakeholders?
Guiding Principles

- equitable use
- remote sensing
- planetary protection
- province of all mankind
- national space legislation
- authorization of private activities
- benefit and interest of all countries
- non-appropriation
- envoys of mankind
- limited natural resources
- space traffic management
- international cooperation
- freedom of uses needs of developing countries
- state responsibility
- state liability
Time for action

- Maintain the rule of law in outer space and the freedom of use
- Guarantee a legal system providing equality and equitability
- Aim at coherence for international space law (UNCOPUOS, ITU, ICAO) and between international and national space law (avoiding flags of convenience)
- Shape space law and regulations which support the sustainable and safe use of outer space (environment free of debris)
- Develop space law to build overarching bridges with other technological frontiers and human endeavours thus enabling future advancements
- Provide legal and regulatory provisions which support reaping the socio-economic benefits of space activities and the use of space resources
The contribution of IISL

- Only global professional association for space law with members from around 50 countries on all continents (members with important roles in international and national development of space law)
- Movement for the promotion and further development of space law
- Platform for discussing in a globally inclusive way the approaches and understandings of space law (symposia and workshops)
- Testbed for upcoming issues and new concepts of space law (e.g. space and cyber law, law for the space between air space and outer space, Space Traffic Management)
- Capacity building for and through the next generation (Manfred Lachs Moot Court Competition, paper competitions)

A perspective for the next 50 years

Space law meeting the needs for today’s and tomorrow’s exploration and use of outer space…

beneficial   equitable
prosperous   coherent
cohesive     efficient
peaceful     safe and secure
sustainable

…and by this promoting the rule of law.
